

Shivansh Mishra

Mumbai, India | +91 9820689183 | Shivansh54mishra@gmail.com | [LinkedIn](#) | [GitHub](#)

TECHNICAL SKILLS

Programming Languages: Java, C, JavaScript, MySQL, HTML

Frameworks & Technologies: Spring Boot, Spring Security, Hibernate, JPA, React.js, Tailwind CSS, REST APIs

Developer Tools: Git, GitHub, Maven, IntelliJ IDEA, VS Code, Postman, JUnit

Computer Science Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Microservices

EDUCATION

K.J. Somaiya Institute of Technology

B.Tech in Information Technology (CGPA: 8.72)

Sion, India

Expected Graduation: May 2028

R.K. Talreja College

Class XII (HSC) – Score: 89.33% (College Topper, Principal's Award)

Ulhasnagar, India

2024

Patil Bal Mandir School

Class X (SSC) – Score: 88.40%

Kalyan, India

2022

PROJECTS

ShortUrl – Distributed URL Shortening Platform | *Java, Spring Boot, React.js, MySQL, Microservices*

GitHub

- Architected a distributed system utilizing independent API Gateways and microservices to ensure fault isolation, high availability, and exceptional software quality at scale.
- Implemented a Base-62 encoding algorithm supporting 56.8+ billion unique URL combinations with collision detection and handling.
- Achieved read/write separation by decoupling redirect traffic, which accounts for over 95% of total system requests.
- Developed JWT-based authentication and centralized security using Spring Cloud Gateway and Spring Security.
- Built a distributed architecture using Netflix Eureka for dynamic service discovery and load balancing across microservices.
- Optimized redirection workflows with asynchronous click tracking, utilizing real-time monitoring tools to maintain and target sub-15 ms p95 redirect latency.
- Engineered the system for 99.99% target uptime with support for horizontal scaling and future Redis-based caching.
- Engineered and validated RESTful APIs using automated testing frameworks to ensure highly reliable authentication, URL generation, and link management.

Track2Act – AI-Powered Logistics Tracking & Fleet Management | *Java, Spring Boot, React.js, MySQL*

GitHub

- Architected a full-stack logistics platform with Role-Based Access Control (RBAC) for Administrators, Company Officers, Drivers, and Public Users.
- Implemented JWT-based authentication and authorization using Spring Security for secure access management.
- Developed RESTful APIs for fleet management, driver assignment, and shipment tracking workflows.
- Built interactive maps using React Leaflet to visualize live locations and historical shipping routes.
- Optimized MySQL relational database structures and cloud queries to ensure data scalability, supporting real-time monitoring across 10+ logistics workflows.
- Enabled end-to-end shipment visibility by supporting 4 distinct user roles and 10+ logistics workflows across the platform.

Authentication & Authorization Engine | *Java, Spring Boot, Spring Security, JWT, MySQL*

GitHub

- Built a standalone identity provider subsystem utilizing JWT to secure 10+ role-based API endpoints.
- Configured secure password hashing using BCrypt and centralized exception handling to improve system reliability and maintainability.
- Developed custom Spring Security filters and interceptors to enforce authentication and authorization constraints across all incoming REST requests.
- Implemented asynchronous email notification workflows using Spring's task executors, reducing user-facing response delays during account operations.

EXPERIENCE

Web Development Intern

August 2025 – September 2025

Skill Craft Technology

Remote

- Developed and deployed 4 web-based projects, including a responsive landing page, an advanced calculator, a to-do web application, and an interactive browser-based game.
- Built responsive and user-friendly interfaces using React.js, CSS, and JavaScript, focusing on modern UI/UX design principles.
- Gained hands-on experience with browser internals, including the DOM, event handling, rendering pipelines, and client-side application workflows.
- Collaborated within a remote environment following Agile/Scrum principles to design, develop, and test software products, ensuring clean browser-internal rendering pipelines.

ACHIEVEMENTS & CERTIFICATIONS

Hackathon Excellence: Secured Semi-Finalist rank in the ET GenAI Hackathon 2026 out of over 55,000 global applicants.

Engineering Leadership: Won Top10 Place out of 50+ competing teams at a collegiate software hackathon; directed system architecture for a 4-member team across 4 national competitions.

Academic Merit: Achieved 1st Rank in Class XII board examinations across the college and secured 3rd Rank in Class X examinations.

Algorithmic Proficiency: Solved 202+ Data Structures and Algorithms problems on LeetCode, demonstrating strong fundamentals in problem-solving and complexity analysis; successfully cleared the HackerRank Software Engineer Intern Certification.

Professional Upskilling: Completed the J.P. Morgan Software Engineering Job Simulation, mastering corporate agile patterns and software testing principles.
